

1. **Research Title:** Numerical Simulation of Aerospace Plasmas
2. **Individual Sponsor:**

Dr. Nicholas Bisek, AFRL/RQHF
AFRL/RQHF BLDG 146 RM 225
2210 EIGHTH ST
WPAFB, OH 45433-7512
Nicholas.bisek.1@us.af.mil

3. **Academic Area/Field and Education Level:** Engineering Physics, Applied Physics, Mechanical Engineering, Aerospace Engineering (MS and/or Ph.D. level)
4. **Objectives:** Develop numerical tools to study the operation of plasma-based flow control and combustion-enhancement technologies
5. **Description:** In recent years, a number of plasma-based technologies have been proposed for flow control and combustion enhancement in applications on high-speed air vehicles. Accurate computational modeling of these devices remains elusive because of the extremely complex, multi-disciplinary physics involved. The present topic aims to address this deficiency, focusing on the enhancement of AFRL in-house codes for electrical discharge modeling. Possible research topics include:
 - Develop and implement a reduced-order plasma-enhanced combustion model
 - Carry out numerical simulations of microwave discharges for flow control and combustion enhancement
 - Study the thermal energy balance in transient discharges

A prospective student will need to have strong programming skills, and an interest in applied physics.

6. **Research Classification/Restrictions:** US citizen or US permanent resident. Candidate will require access to DoD computer systems and export-controlled software.
7. **Eligible Research Institutions:** Indicate to what organizations this topic should be provided
